

_appserverx_xml_CacheSavePath

Description:	CacheSavePath parameter specifies either a full or relative path to a file which will be used for periodic dumping of the cache content. This file will be created if it doesn't exist, or overwritten if it does.  To enable this option, make sure that AppServerX processes have write permissions to that file.
Parameter type:	String
Default value:	None
Possible values:	Full or relative path to a file on a server.

<CacheSavePath></CacheSavePath>
