

Do you have an API for dynamic creation of custom dictionaries?

The [custom_dictionary](#) command is available for the WebSpellChecker server/on-premise version since the release of v5.23.0.0 in July 2022. The custom dictionary's Web APIs for the Cloud version are under development and are coming soon.

- If you are using the Cloud version, you can create a custom dictionary from your account on our website. Refer to [Configuring cloud custom dictionary](#) guide to learn how to create and manage dictionaries for the Cloud version.
- The holders of the previous Server version need to follow [Company custom dictionary](#) guide.
