

License verification

You can verify a license type and its validity period by accessing one of the log files located in **AppServer/Logs** folder and verifying the license status. By default, the **/Logs** folder contains **Action.log**, **Main.log**, and several child log files such as **Child_0.log** and **Child_1.log**.

Good to know:

- License Ticket ID is a special license activation key that is required for the WebSpellChecker application usage.
- There are two types of License Ticket IDs available: 30-day trial and commercial (1 year). Except the validity period, there is no difference between ticket types from the technical perspective.
- WebSpellChecker license is hardware-based.

1. Locating Log Files

The location of **Logs** folder directly depends on the type of the environment where the WebSpellChecker application is installed and running.

- Path to **Logs** folder on a **Windows** server:

```
/<WebSpellChecker_Installation_Path>/WebSpellChecker/AppServer/Logs
```

- Path to **Logs** folder on a **Linux** server:

```
/ <WebSpellChecker_Installation_Path>/WSC/AppServer/Logs
```

2. Verifying the License Status

To verify the license status:

1. Open one of the logs files in the **Logs** folder.
2. Locate the records with **License status** information. Based on your license status, you may see the following messages:

```
License status: Successful activation. License term is <365/30> days.  
License status: Successful activation. License is permanent.  
License status: License is absent. The license activation is required.
```
