

Installation requirements

WebSpellChecker is a web-based application, meaning it runs centrally on a server and users interact with it through web browsers.

Before installing WebSpellChecker Server, **make sure you have familiarized yourself with:**

1. Software architecture diagram. For details, visit [Architecture diagram](#).
2. Deployment options. For details, visit [Deployment options](#).
3. System requirements
 - a. Hardware requirements. Refer to [Hardware requirements](#) or [Hardware requirements for v5.7.0+](#) pages accordingly that describe optimal requirements for HDD, RAM, CPU and supported cloud computing providers.
 - b. Software requirements. Refer to [Software requirements](#) page which lists the additional required server and client software like operating systems, web or Java application servers, web browsers.
4. Internet connection. Visit [Internet connectivity requirements](#) for more details.
