

Supported languages

You may try to evaluate spell & grammar checking functionality for a chosen language on the [supported languages demo page](#).

Here is a list of all available and supported languages with their short codes starting the **version 5.17.0 (December 27, 2021)**.

- The language codes have the following format: [language_code]_[country_code].
- The next language and country codes standards have been used: [ISO 6391](#) and [ISO 3166-1](#).
- The default language for localization of user interface is **American English**. If not defined explicitly, the interface language will be set based on the browser localization.
- **Enabled*** column indicates the languages that are in the enabled state in the on-premise package starting from v5.17.0 and until v5.29.0. The rest languages are in the disabled state but can be easily enabled as described in [Managing languages state in v5.17.0+](#). For later on-premise versions, the languages should be specified during the installation.

#	Language	Spelling	Grammar	Medical	Legal	Country	Short code	Localization	Number of words	Comments	Enabled* (v5.17.0-v5.29.0)
1	Auto Detect						auto	-	-	Auto detect defines a language and sets a correct language for further check.	Yes
