

WebSpellChecker Setup fails with Runtime Error (at 135:509): appcmd.exe returned code 3

Problem & Symptoms

During the installation of the WebSpellChecker Server 5.4.x package on Windows Server utilizing the IIS web server, the installation wizard fails with "Runtime Error (at 135:509): appcmd.exe returned code 3" or "Runtime Error (at 135:509): appcmd.exe returned code 1168".

Solution

To fix the issue with a runtime error, you need to edit the **web.config** file (...WebSpellChecker\WebComponents\WebInterface\script\l) as in the example below:

web.config

```
<?xml version="1.0" encoding="UTF-8"?>
<configuration>
  <system.webServer>
    <security>
      <requestFiltering>
        <requestLimits maxUrl="20480" maxQueryString="18432" />
      </requestFiltering>
    </security>
    <handlers>
      <add name="WscFastCgi" path="ssrv.*" verb="*" modules="FastCgiModule" scriptProcessor="C:\Program
Files\WebSpellChecker\WebComponents\WebInterface\script\ssrv.exe" />
    </handlers>
  </system.webServer>
</configuration>
```
